

Breast Augmentation Mammogram
Aesthetic and Reconstructive Plastic Surgery
Rajiv Sood, M.D., F.A.C.S.
(317) 880-6825

It is my recommendation, that every patient undergoing surgical breast procedures, whether reconstructive or cosmetic, obtain a routine mammogram prior to surgery. This is a safety measure which allows the patient to be aware of any breast abnormalities and/or establish a baseline mammogram prior to breast surgery which may change the anatomy of the breast tissue.

After evaluation with patient; all risks, benefits and complications were discussed. Patient wishes to proceed with scheduled surgery of Bilateral Breast Augmentation without first obtaining a mammogram.

Current recommendation is for patient to obtain mammogram 6 months post surgery date. Patient stating she is in agreement to obtain mammogram at that time.

I consent to the procedure and the above recommendation. I am satisfied with the explanation. All my questions have been answered.
